ABOUT ME

Motivated and focused Computer Science student with a strong interest in Data Structures & Algorithms, Competitive Programming, and Software Development. Passionate about building practical technology solutions and continuously improving problem-solving and programming skills.

EDUCATION

Bachelor of Technology (B.Tech.) — Computer Science & Engineering

ABES Engineering College, Ghaziabad | First-Year CGPA: 8.58 / 10

TECHNICAL SKILLS

Languages: C++, Python libraries(Numpy,Pandas,Matplotlib), JavaScript

Technologies: React, PostgreSQL

Areas of Interest: Data Structures & Algorithms, Competitive Programming, AI, Web Development

PROJECTS

Saraswati AI — AI-Powered Study Platform | *React, FastAPI, Mistral API, LangChain, PostgreSQL*

- Built an AI-powered study platform where students organize notes in a folder-based structure similar to a personal computer.
- Integrated AI into the note-reading experience, enabling students to ask questions and clarify concepts while studying.
- Designed responses to remain grounded strictly in the student's uploaded notes, using the terminology and context present in the notes rather than vague external information.
- Focused on an exam-centric learning experience for targeted revision and concept clarification.

ABESAUTONOMY — Academic Resource Platform

- Developed a centralized platform for ABES students to discover and access academic study material following the institution's transition to an autonomous system.
- Organized study resources in a structured manner across subjects, semesters, and academic requirements.
- Addressed scattered and unorganized study material by providing students with a dedicated academic resource platform.

Project Resonance — Accessibility Tool | *JavaScript, Gemini 1.5 API*

- Developed an AI-powered Chrome extension designed to help visually impaired users understand internet memes by dynamically reading their context, vibe, and humor.
- Engineered the core architecture using DOM manipulation and background service workers to intercept web content and securely route relevant data to the Gemini API.
- Secured a Top 33 placement among 120+ participating teams at the MLH HackDays offline hackathon.

CODING & COMPETITIVE PROGRAMMING

- [LeetCode](#): Solved 180+ problems, focusing on Data Structures & Algorithms and problem solving.
- [CodeChef](#): Participated in 30+ competitive programming contests.
- [HackerRank](#): 5★ in Problem Solving.
- [Codeforces](#): Currently focusing on Competitive Programming to strengthen problem-solving and advanced DSA skills.
